nVision Global®

nVision Global's IMPACT TMS is a revolutionary new application that can be configured to fulfill your company's needs and requirements. The application is developed in a modular format to allow you to add and remove functionality with minimum interruption to your everyday business processing.

The Challenge

With an increasing demand for continuous supply chain improvement, short delivery cycle time expectations, raw material and supplier capacity constraints; our customer needed a highly configurable and customizable solution that optimizes the overall supply chain process.

The Solutions

One of Leading North America Distributor of Rigid Packaging partnered with nVision Global and began utilizing their Global IMPACT TMS platform. This solution required an analysis and reconfiguration of the distribution network to align with internal goals and customer requirements. In addition, the IMPACT TMS provided real time data integration of orders, tendered rates and tracking status. Furthermore, an implementation of a centralized logistics control center to manage online freight auctions was executed, as well as, the development of standard KPIs to measure Logistics Service Provider (LSP) and supplier performance.

The Results

As a result of utilizing nVision Global's IMPACT TMS, our customer has saved over \$2,000,000 in year 1 by avoiding expedited freight costs. By using the IMPACT TMS solution, they have improved transportation planning and optimization capabilities. They have also seen increased accuracy upon execution, improved workflow management and exception handling. In addition, there has been further savings due to tactical and strategic carrier sourcing and load consolidation.

Our customer also utilizes other nVision Global services including Freight Audit & Payment, Business Intelligence and Claims Management to further their cost savings, gain access to vital data and ultimately they have achieved visibility to their entire global supply chain.
